

# Salish Organics

Fostering Sustainable  
Agriculture on the Sunshine  
Coast - 2014

The Salish team assisted in propelling forward the "local food movement" by creating an Organic Urban Farm on a reclaimed Gravel Mine site.

Demonstrating the Zero Mile Diet concept the Salish Farm Gate was established with many residents enjoying fresh organic produce while returning the green scraps to the compost on site!

The farm harvested over 2 tons of available and nutritious produce, achieving its mandate of feeding the locals while providing a healthy learning environment for our youth.

**Class A Compost Approved by the  
Ministry of Environment**

**Approved for Certified Organic  
Growers**

**Organic Garden Mix \$50 yd.**

**Ideal for greenhouses, gardens,  
raised beds, container growing.  
Water holding capacity, drainage  
and fertility designed by professional  
growers and soil scientists.**

**Landscape Mix \$40 yd.**

**For grass seeding, tree and perennial  
establishment, slope-preparation.  
Designed to BC Landscape Standards**

# Growing Innovation

The Salish Soils Team upholds an ecologically responsible vision that leads to less waste and greater sustainability.

Our innovative business culture believes in win/win, cross-cultural partnerships, which uphold a business model based in honest communication and relationships.

We are dedicated to providing community access to nutritious soils products, by supporting school programs, sustainable agriculture and First Nations Garden programs.

## Transforming Sunshine Coast Waste... Into Renewable Resources and Jobs!

Salish Soils employs a state of the art composting process that uses “Gore” technology.

Our excellent technicians produce a Class A Compost that is approved by the Ministry of Environment for Certified Organic Growers!!

Our facility receives Green Waste which along with Fish Finds, is the basis of our excellent grow medium.

In 2014 a Curbside Food Collection pilot was implemented. This waste stream is blended with forest finds to produce a unique and nutritious blend of natural, organic soil amendment.

Wood Construction Waste is accepted at our depot, where the material is chipped and sent to Port Mellon for biomass energy production.

We are really excited to embrace yet another transformation of a community waste product into a useful and life enhancing soil amendment!

In Spring 2015 the Salish team will begin taking dewatered biosolids from the Sechelt Water Resource Center to a **separate** site for compost preparation. The resulting material will be composted according to the Provincial standards to produce a Class A “Biosolids Compost” This compost is suitable for unrestricted use except for Certified Organic Growers. We are very proud for the community of Sechelt to demonstrate its care for the Earth in the responsibility of recycling our waste.

Our Fresh New Recycling Depot is organized and tidy and is popular with residents who enjoy the friendly experience.
